1. Introduction

- Give a brief introduction to your project and the list of features. Summarize in a few sentences what you proposed in the ideation report.
    A dessert/Cake Baking Website

    It will have: A nav bar that holds a logo, links to a gallery of her desserts, about page, upcoming events, request for service form. Social Media links and contact information at the bottom of all the pages, lots of pictures throughout the site. Perhaps one big clear picture when you first land on the site and when you scroll it goes up but the nav bar stays at the top.

2. User Interface Design and Prototype

- Give some sample user interface layouts for your application. You can use either wireframe diagrams or prototyping tools to construct the mock representations of your UI design

- Briefly explain the rationale behind designing your UI and how it is geared towards supporting the list of features for your application.

My main objective is to have something big and bold as a picture on the landing page. I want it to be easy to find where to contact her and request service.

3. Navigation Structure

- Give a brief overview of the navigation structure for your application.

  Simple navbar either centered or over to the right. All navbar options will stick to the top throughout the site and breadcrumbs will be underneath. Perhaps it will change color when scrolled. On mobile devices/smaller viewports it will collapse but the picture will remain. The nav bar options will light up or be underlined when hovered over

- Briefly indicate a typical flow of your application in terms of user experience. You can use any way of representing the flow. You can also construct a prototype using one of the prototyping tools to illustrate this.

  When the user enters the landing page they should see a picture(s) along with her title and a slogan. Her logo will be in the top left. The navbar should also be visible. When scrolling the navbar should stay at the top, it may change colors, and the picture will disappear. Then it will come to some upcoming events, maybe a few pictures of her and her desserts. In the navbar the request for service form will take them to a form that when filled out will send her the order. The gallery option on the navbar take them to a page that will show all of her cakes/dessert. When clicked on it will show a brief description of what they are and their cost. The contact option will be at the bottom of each of the pages. When selected on the navbar it will take them to the bottom of that page. Upcoming events will give a more in depth synopsis of the events she will be attending and About will tell about her.
